

**Determine which choice shows the expression used to solve the problem.****Answers**

- 1) Henry was making ice using ice trays. He originally had seven ice cubes. But made eight more cubes. How many ice cubes did he have total?  
A.  $7 + 8$                       B.  $8 - 7$                       C.  $7 \times 8$                       D.  $8 \div 7$
- 2) The soda machine in the lobby of a hotel cost two quarters for each can. How many quarters would you need for three sodas?  
A.  $2 + 3$                       B.  $3 - 2$                       C.  $2 \times 3$                       D.  $3 \div 2$
- 3) Vanessa bought six pencils at the school store, but she already had two pencils. How many pencils does she have total?  
A.  $6 + 2$                       B.  $6 - 2$                       C.  $6 \times 2$                       D.  $6 \div 2$
- 4) Tom bought his family twelve pieces of chicken for dinner. If they only ate seven, how many pieces does he have left?  
A.  $12 + 7$                       B.  $12 - 7$                       C.  $12 \times 7$                       D.  $12 \div 7$
- 5) Luke was packing up his old toys. He managed to squeeze three toys into a box. If Luke filled up two boxes, how many toys did he pack total?  
A.  $3 + 2$                       B.  $3 - 2$                       C.  $3 \times 2$                       D.  $3 \div 2$
- 6) For Tiffany's birthday she received thirteen dollars. If she spent nine dollars. How much money did she still have?  
A.  $13 + 9$                       B.  $13 - 9$                       C.  $13 \times 9$                       D.  $13 \div 9$
- 7) There are thirty-six students in a class. If the teacher put them into groups with four students in each group, how many groups would she have?  
A.  $36 + 4$                       B.  $36 - 4$                       C.  $36 \times 4$                       D.  $36 \div 4$
- 8) There are thirty-two students going on a field trip. If each school van can hold eight students, how many vans will they need?  
A.  $32 + 8$                       B.  $32 - 8$                       C.  $32 \times 8$                       D.  $32 \div 8$
- 9) Ned bought several boxes of books at a yard sale and ended up with twenty-one books total. If each box had three books how many boxes did he buy?  
A.  $21 + 3$                       B.  $21 - 3$                       C.  $21 \times 3$                       D.  $21 \div 3$
- 10) A designer was buying furniture for her new house. She bought four chairs for the living room and three for her kitchen. How many chairs did she buy total?  
A.  $4 + 3$                       B.  $4 - 3$                       C.  $4 \times 3$                       D.  $4 \div 3$
